

Code-Layout, Readability and Reusability

Date	29 June 2026
Team ID	
Project Name	Rising Waters: AI-Powered Flood Risk Prediction System
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. Well-organized code with proper naming conventions, comments, and modular design ensures that the project is maintainable and can be extended or reused in future development.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes/No/Partial)	Remarks
1	Consistent Indentation	Uniform spacing and indentation are maintained throughout the project for better readability.	Yes	Code follows a consistent formatting style.
2	Proper File Structure	Project files are organized into separate folders for templates, static files, datasets, and backend code.	Yes	Easy to navigate and maintain.
3	Meaningful Variable Names	Variables are named according to their purpose, making the code easy to understand.	Yes	Descriptive names improve readability.
4	Function / Method Names	Functions use meaningful names that clearly describe their operations.	Yes	Easy to identify the functionality of each method.
5	Code Comments	Important sections include comments to explain the logic and improve understanding.	Partial	Comments are available in key areas but can be expanded.

6	Modular Design	The application is divided into reusable modules such as frontend, backend, and prediction logic.	Yes	Makes future enhancements easier.
7	No Redundant Code	Duplicate code has been minimized by reusing functions wherever possible.	Yes	Reduces maintenance effort.
8	Error Handling	Basic input validation is implemented, with scope for more comprehensive exception handling.	Partial	Additional exception handling can be added in future versions.

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level
1	Flood Risk Prediction Module	Python, Scikit-learn	Flood risk prediction feature	High
2	Data Processing Module	Pandas, NumPy	Input preprocessing and prediction	High
3	Flask Routes	Python, Flask	Handles multiple web requests	High
4	User Interface Pages	HTML, CSS, JavaScript	Used across all application pages	Medium
5	Prediction Function	Python	Flood risk prediction and analysis	High

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	5	Project has a clean and organized folder structure.
Readability	5	Code is easy to understand with meaningful names and formatting.
Reusability	5	Core modules and functions can be reused in future enhancements.
Documentation / Comments	4	Key sections are documented; additional comments can improve maintainability.
Overall Score	4.8 / 5	The project is well-structured, maintainable, and suitable for future development.
